

## Primary Care Performance Metrics

MVP Health Care is pleased to introduce a new initiative aimed at sharing health care performance information with our members via the MVP Web site. Public information about health care quality is important and can be used in making personal health care decisions. The personal responsibility you take for your health care, and the partnership established with your primary care physician, are essential for top performance to be realized.

In comparing data across medical groups, please consider that variations in patient conditions and severity may be a factor in reported performance. Each medical group's performance is compared to MVP's HMO averages and goals. If there is more than one physician in the same medical group, their scores were combined and either reported under the medical group name or reported together using their individual names.

Our experience has been that some data obtained from claims may be incorrectly submitted. Because of this there may be a slight margin of error. Each quality measure shown in these reports reflects only a portion of the care provided by the physicians within these groups and should not be used as a sole basis for decision making. We encourage you to consider this information as well as other resources before selecting a physician to receive care from.

We hope you find this information helpful and we welcome your feedback. Please e-mail your questions or comments to [preferredperformance@mvphealthcare.com](mailto:preferredperformance@mvphealthcare.com). We solicit feedback from both physicians and members to help us clarify existing reports and to develop future reports that are meaningful.

## Primary Care Performance Metrics

Recognition	Description
★	Physician/Group has met the MVP credentialing standards
★★	Physician/Group has met or exceeded MVP's average for this measure
★★★	Physician/Group has met or exceeded MVP's goal for this measure
N/A	Physician/Group does not have enough members to qualify for measure

Measures	Measure Description	★★ MVP Rochester Average	★★★ MVP Rochester Goal
Taking New Patients	Panel open to new MVP members.	N/A	N/A
Breast Cancer Screening	The percentage of MVP women, ages 42-69, who had a mammogram within the last two years.	73%	83%
Cervical Cancer Screening	The percentage of MVP women, ages 21-64, who had a pap smear within the last three years.	79%	88%
Diabetes HbA1c <7.0	The percentage of MVP members, ages 18-75, with diabetes, whose HbA1c was less than 7% (well controlled).	54%	69%
Diabetes LDL-C Test	The percentage of MVP members, ages 18-75, with diabetes, who had an LDL-C (bad) cholesterol screening test within the last year.	88%	97%
Diabetes LDL-C <100 mg/dL	The percentage of MVP members, ages 18-75, with diabetes, whose LDL-C level was less than 100 mg/dl (well controlled).	65%	80%
CAD LDL-C<100	The percentage of MVP members, ages 18-75, with coronary artery disease, whose LDL-C (bad) cholesterol level is less than 100 (well controlled).	75%	90%

## Explanatory Text for Primary Care Performance Metrics

		Why each measure is valid	How member can better partner in care
Breast Cancer Screening	The percentage of MVP women, ages 42-69, who had a mammogram within the last two years.	Screening tests, such as mammograms and Pap smears, can find diseases early when they are easier to treat. Some women need certain screening tests earlier, or more often, than others.	Talk to your doctor about which of the tests listed below are right for you, when you should have them, and how often. <ul style="list-style-type: none"> <li>• <b>Mammograms:</b> every 1 to 2 years starting at age 40</li> <li>• <b>Pap Smears:</b> every 1 to 3 years if you have been sexually active</li> </ul>
Cervical Cancer Screening	The percentage of MVP women, ages 21-64, who had a pap smear within the last three years.		
Diabetes HbA1c <7.0	The percentage of MVP members, ages 18-75, with diabetes, whose HbA1c was less than 7% (well controlled).	If you do not have your high blood sugar controlled you could lose your eye sight, as well as suffer kidney damage. This can be prevented if your blood sugar levels are controlled.	Taking care of your diabetes helps you take care of your heart. <ul style="list-style-type: none"> <li>• Control your blood sugar every day</li> <li>• If you smoke, stop</li> <li>• Be active every day</li> <li>• Keep a healthy weight</li> <li>• Eat fewer fatty foods</li> <li>• Take your cholesterol-lowering medication, if ordered</li> <li>• Remind your doctor to check your cholesterol</li> </ul> If you are not already enrolled, sign up for our Diabetes Care Program.
Diabetes LDL-C <100 mg/dL	The percentage of MVP members, ages 18-75, with diabetes, whose LDL-C level was less than 100 mg/dl (well controlled).	You are more likely to get heart disease and blood vessel damage if you have diabetes.	
Diabetes LDL-C Test	The percentage of MVP members, ages 18-75, with diabetes, who had an LDL-C (bad) cholesterol screening test within the last year.	Controlling lipid levels reduces the risk for heart attack and stroke.	
CAD LDL-C <100	The percentage of MVP members, ages 18-75, with coronary artery disease, whose LDL-C (bad) cholesterol level is less than 100 (well controlled).	High blood cholesterol is one of the major risk factors for heart disease. Too much cholesterol in the blood builds up in the walls of the arteries and blocks the blood flow to the heart. LDL (bad) cholesterol is the main source of cholesterol buildup and blockage in the arteries.	Know your cholesterol numbers and risk factors for developing heart disease or having a heart attack. Learn how to lower your cholesterol by the following: <ul style="list-style-type: none"> <li>• Cholesterol lowering diet</li> <li>• Physical activity</li> <li>• Weight management</li> <li>• Cholesterol lowering medication</li> </ul>
Taking New Patients	Information for MVP Option is reported separately from Preferred Gold/Gold Anywhere and Commercial. If a Y is present this means that at least one members of the group is accepting new patients. Refer to the provider search of our Web site at <a href="http://www.mvphealthcare.com">www.mvphealthcare.com</a> for individual Doctor listings.		
NCQA Recognitions	The National Committee for Quality Assurance (NCQA) offers Physicians the opportunity to be recognized for demonstrating a high level of performance in providing care. Recognitions are currently available in diabetes, back pain, heart/stroke care, Physician Practice Connections-the use of up-to-date information and systems to enhance patient care, and the Patient Centered Medical Home. If there is a program listed, at least one physician in that practice has earned a certification. More information is available at <a href="http://www.ncqa.org/tabid/74/Default.aspx">http://www.ncqa.org/tabid/74/Default.aspx</a>

It is important to MVP Health Care that the data presented accurately represents the performance of each practice. As a result, we only include those practices with a least 250 members. Even with this requirement, there may be other factors that can impact the report performance. If the practice has less than 30 patients for a measure, there will not be a score for that measure. If your physician is missing from this report it only means that there are not enough MVP Health Care members in that practice to complete this report.
