

Special benefit for MVP Health Care® Medicare Advantage plan members living with hypertension—

get a blood pressure cuff for no cost.

People living with hypertension need to test their blood pressure regularly. High blood pressure usually doesn't have any symptoms, so if you don't check your blood pressure often, you won't know when it's high. Increased blood pressure can damage the blood vessels, heart, and kidneys, which can lead to heart attack, stroke, kidney disease, and other problems.

Monitoring your blood pressure at home is important for you and your doctor to manage your hypertension. To help MVP Medicare Advantage plan members living with hypertension keep up with regular testing, your health plan offers **a home blood pressure cuff at no additional cost to you.**

Am I eligible for this benefit?

If you are being treated by your doctor for high blood pressure or have a confirmed hypertension diagnosis in your medical records, you can receive one blood pressure cuff at no cost.

How do I get a blood pressure cuff?

You can choose from two different blood pressure cuff models covered under your benefit. To place your order, call DME Supply USA at **1-844-361-8264**, Monday–Friday 8 am–5 pm, or visit **dmesupplyusa.com/mvp** and select *Hypertension*. Standard shipping is free.
