

New Medicaid Managed Care Benefits

Starting January 1, 2020 MVP Health Care® (MVP) will cover more Children and Family Treatment and Support Services (CFTSS). These services help children and their families improve their health, well-being, and quality of life.

CFTSS are for children under age 21 with behavioral health needs. These services may be provided at home or in the community. Beginning January 1, 2020, MVP Medicaid Managed Care members under age 21 will be able to access the following services:

Youth Peer Support and Training

This benefit is provided by a credentialed Youth Peer Advocate, or Certified Recovery Peer Advocate with a youth focus who has similar experiences. This benefit provides support and assistance with:

- Developing skills to manage health challenges and be independent,
- Feeling empowered to make decisions,
- Making connections to natural supports and resources, and
- Transitioning to the adult health system when the time is right.

Crisis Intervention

This benefit provides professional help at home or in the community when a child or youth is distressed and can't be helped by family, friends, and other supports. This benefit includes support and help with using crisis plans to de-escalate the crisis to prevent or reduce future crises.

MVP may already cover these services for certain eligible children under age 21. If a member is currently getting these services, their care will not change.

For educational trainings on these services, please go to mvphealthcare.com/providers/education and select *Clinical Education* and then *Support for Children and Adults*.
