

Measure Description

Persons 12 years of age and older who were screened for clinical depression using a standardized instrument and, if screened positive, received follow-up care during 2025.

- Depression Screening-Persons who were screened for clinical depression using a standardized instrument
- Follow-Up on Positive Screen-Persons who received follow-up care within 30 days of a positive depression screen finding

Depression screening captured in health risk assessments or other types of health assessments are allowed if the questions align with a specific instrument that is validated for depression screening. For example, if a health risk assessment includes questions from the PHQ-2, it counts as screening if the person answered the questions and a total score is calculated.
