

## **MVP Health Care Medical Policy**

#### Medicare Part B: Calcitonin Gene-Related Peptide (CGRP) Antagonists

Type of Policy: Drug Therapy

Prior Approval Date: N/A

Approval Date: 11/01/2023 Effective Date: 01/01/2024

Related Policies: N/A

Refer to the MVP Medicare website for the Medicare Part D formulary and Part D policies for drugs that may be covered under the Part D benefit.

### **Codes Requiring Prior Authorization (covered under the medical benefit)**

J3032 Vyepti (injection, eptinezumab-jjmr, 1mg)

# **Overview/Summary of Evidence**

Migraine is a common disabling primary headache disorder. In the Global Burden of Disease Study 2010 (GBD2010), it was ranked as the third most prevalent disorder in the world. In GBD2015, it was ranked the third-highest cause of disability worldwide in both males and females under the age of 50 years.

Cluster headaches is a debilitating primary headache disorder defined as a severe attack that can last weeks or months (also known as "cluster periods"). Cluster headaches are categorized as episodic (having pain free remission periods) and chronic (do not have pain free remission periods). Currently, Emgality is the only CGRP Antagonist indicated for the treatment of episodic cluster headache.

Medication overuse headache is not an approved indication for calcitonin gene-related peptide antagonists and providers should assess their patients and rule out prior to initiating therapy.

Calcitonin Gene-Related Peptides (CGRP) receptor antagonists are a group of medications indicated in either the prophylaxis or acute treatment of migraine headaches. Aimovig, Emgality, Vyepti, Nurtec and Ajovy are FDA approved for migraine prophylaxis while Nurtec and Ubrelvy are FDA approved for acute migraine treatment.

## Indications/Criteria for prophylaxis for Vyepti

Requests will be considered for coverage when all the following are met:

- Patient is 18 years of age or older
- Diagnosis of chronic or episodic migraine

#### For chronic migraine:

- Inadequate response (defined as less than a 2 day decrease per month in headache frequency) to at least a 1 (one)trial to at least 1 (one) prophylactic medication (i.e., topiramate, divalproex, propranolol, metoprolol, timolol, amitriptyline, verapamil, venlafaxine) at maximally tolerated doses.
  OR
  - o Patient has a contraindication to all drugs in all classes of medications

#### For episodic migraine:

- Inadequate response (defined as less than a 2 day decrease in headache frequency) to at least a 1 (one)-month trial to at least 1 (one) prophylactic medication (i.e., topiramate, divalproex, propranolol, metoprolol, timolol, amitriptyline, verapamil, venlafaxine) at maximally tolerated doses.
  - OR
  - o Patient has a contraindication to all drugs in all classes of medications

## For Vyepti:

- All applicable criteria listed above AND
- Documentation identifying medical necessity why the member is unable to use a self-administered product (such as a failure, intolerance, or contraindication to self-administered products).
  - If applicable, documentation should also include why the member or caregiver is unable to administer a self-administered product.

 Refer to the MVP Medicare website for the Medicare Part D formulary and Part D policies for drugs that may be covered under the Part D benefit.

**Initial approval** will be for **3 months**.

**Extension requests** will be approved for **up to 12 months** if the member has a continued benefit to therapy.

#### **Exclusions**

- Off-label diagnosis
- Dosing and/or frequency inconsistent with FDA approved labeling
- History of hemiplegic ophthalmoplegic, migraine with brainstem aura, or persistent daily headaches
- Use of devices (i.e., nerve blocks and transcranial magnetic stimulation)
- Age of migraine onset is greater than 50 years
