

2018 HEDIS Reference Guide for Primary Care

Diabetes Screening for People with Schizophrenia or Bipolar Disorder who are using Antipsychotic Medications (SSD)

Patient Profile

MVP members 18-64 years of age, with schizophrenia or bipolar disorder, who were dispensed an antipsychotic medication and had a diabetes screening test during the measurement year.

How Providers & Clinical Staff Can Collaborate to Implement Best Practices and Improve Performance

As a preventative measure, screen your patients for Diabetes annually (Glucose Test or HbA1c) and document the results.

- If the patient reports having had previous lab work, providers must obtain the official results; patient reporting is not valid for medical record entry.
- Educate patients about appropriate health screening with certain medication therapies.
- Make sure the medical record contains the contact information of all the patients' current providers for possible future follow up and care coordination.

Facts

- This measure excludes patients already diagnosed with Diabetes.
- There is a correlation between elevated blood sugars and weight gain when using anti-psychotic medications. This is especially prevalent in patients with Schizophrenia and/or Bipolar Disorder.

Things to Consider

- Can the office EMR be set up to flag for lab test based on diagnosis?
- Routinely arrange for the lab test either to be done in the office during patient's visit or schedule lab testing before patient leaves office.

Diabetes Screening for People with Schizophrenia or Bipolar Disorder who are using Antipsychotic Medications (SSD)

The medication list below is used when evaluating the measure criteria noted above. For information on medications covered by MVP, see the *MVP Medicaid Drug Formulary* available by visiting mvphealthcare.com and selecting *Providers*, then *Pharmacy*, then *MVP Formularies*.

Antipsychotic Medications

Description	Prescription		
Miscellaneous Anti-antipsychotic agents	Aripiprazole	Loxapine	Quetiapine fumarate
	Asenapine	Lurasidone	Risperidone
	Brexipiprazole	Molindone	Ziprasidone
	Cariprazine	Olanzapine	
	Clozapine	Paliperidone	
	Haloperidol	Pimozide	
	Iloperidone	Quetiapine	
Phenothiazine Antipsychotics	Chlorpromazine	Prochlorperazine	
	Fluphenazine	Thioridazine	
	Perphenazine	Trifluoperazine	
Thioxanthenes	Thiothixene		
Long-acting injections	Aripiprazole	Olanzapine	
	Fluphenazine decanoate	Paliperidone palmitate	
	Haloperidol decanoate	Risperidone
