

2018 HEDIS Reference Guide for Primary Care

Follow-up after Hospitalization for Mental Illness (FUH)

Patient Profile

MVP members who are at least 6 years old and have been hospitalized for treatment of a selected mental illness diagnoses. They have also had a post-hospitalization follow-up with a mental health practitioner within two time frames: First, within the first 7 days of discharge and then again within 30 days of discharge.

Note: The day of discharge can no longer be considered in this measure.

How Providers & Clinical Staff Can Collaborate to Implement Best Practices and Improve Performance

- Studies have shown that prompt follow-up with patient's post-hospitalization goes a long way in reducing re-hospitalization. It also ensures better compliance with medications and shows a commitment to best practice initiatives.
- Patients who have had a recent mental health admission, benefit from a follow-up with their mental health provider within the first seven days following the mental health admission and then again within 30 days of discharge. Mental health providers would benefit from keeping availability in their schedule to ensure the ability to add in patients with little notice.
- Evaluate your office triage system and come up with a way to promptly triage calls from hospital discharge planners, as they may want to schedule appointments for patients that are hospitalized. If the hospitalization was for mental health, please tell the discharge planner to make an appointment with patient's mental health provider. Hopefully your records have the provider name and contact information, as the discharge planner may not.
- If you are not a mental health provider, but are seeing a patient who has been treated by a mental health provider, make sure that as part of your assessment, you inquire to whether they have been recently hospitalized. If the answer is yes, ask them when the last time they saw their mental health provider. If they have been hospitalized, but have not seen - or do not have an appointment with their mental health provider, attempt to set one up before the patient leaves the office. If they have missed the 7 day follow-up, attempt to schedule a visit to meet the criteria of 30 days within discharge.
- Continuously educate all of your patients that if they are hospitalized for any reason, it is important to see their doctors as soon as possible post-hospitalization. Continuous reinforcement may help to establish learned behaviors.
