

2018 HEDIS Reference Guide for Primary Care

Metabolic Monitoring for Children and Adolescents on Antipsychotics (APM)

Patient Profile

MVP members 1-17 years of age and have had two or more antipsychotic prescriptions and metabolic testing.

How Providers & Clinical Staff Can Collaborate to Implement Best Practices and Improve Performance

- Routinely arrange for lab tests to be done in the office during a member's visit or schedule lab testing before the member and parent/guardian leave the office.
- Assess whether the office EMR can be set up to flag for lab tests based on diagnosis or when antipsychotic medications are added to the treatment plan.
- Educate the parent/guardian about the appropriate health screening for certain medication therapies.
- Make sure the medical record contains the contact information of all of the patient's current providers, for care coordination.
- If the patient reports having had previous lab work, providers must obtain the official results. Patient reporting is not valid for medical record entry.

Eligible members must have metabolic testing done when at least two antipsychotic medication dispensing events of the same or different medications occur on different dates of service during the measurement year. One test for blood glucose or HbA1c and one test for LDL-C or Cholesterol.

Metabolic Monitoring for Children and Adolescents on Antipsychotics (APM)

The medication list below is used when evaluating the measure criteria noted above. For information on medications covered by MVP, see the *MVP Medicaid Drug Formulary* available by visiting mvphealthcare.com and selecting *Providers*, then *Pharmacy*, then *MVP Formularies*.

Antipsychotic Medications

Description	Prescription		
Miscellaneous Antipsychotic agents	Aripiprazole	Loxapine	Quetiapine fumarate
	Asenapine	Lurasidone	Risperidone
	Brexpiprazole	Molindone	Ziprasidone
	Cariprazine	Olanzapine	
	Clozapine	Paliperidone	
	Haloperidol	Pimozide	
	Iloperidone	Quetiapine	
Phenothiazine Antipsychotics	Chlorpromazine	Prochlorperazine	
	Fluphenazine	Thioridazine	
	Perphenazine	Trifluoperazine	
Thioxanthenes	Thiothixene		
Long-acting injections	Aripiprazole	Olanzapine	
	Fluphenazine decanoate	Paliperidone palmitate	
	Haloperidol decanoate	Risperidone	
Psychotherapeutic combinations	Fluoxetine-olanzapine	Perphenazine-amitriptyline
